

Ensure the safety and convenience of your guests and customers with the Standard N exit. The no need to panic range of exit gates make vacating your guests and customers easy. With this tried-and-tested building block from our customer guidance range, you are always on the safe side – as are your customers.

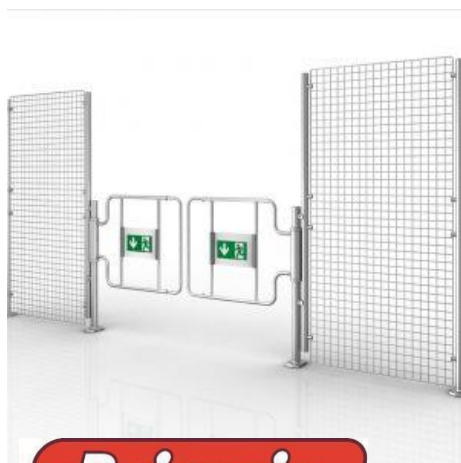

## Design

Sturdy construction from steel tube. Swivel arms in standard or high design; high design is extendable to fit variable access widths. Finish: high-gloss chrome-plated. Plastic info signs, including set of stickers. Panic function on both sides.

## Function

The swivel arms open to 90° when a certain pressure is applied in the direction of escape in an emergency. The escape route is cleared. After the swivel arm has been pressed back into the initial position, the system is ready for operation once again.

## Safety

Safety N exits comply with the guidelines of the German Equipment Safety Act. As a result, official safety requirements are satisfied but please enquire with us directly if you would like any further clarification.
